

# 9001 BLACK DRAGON

1. Clean any flash and seam lines using a hobby knife, file or sandpaper.
2. Wash parts with soapy water, rinse and let dry.
3. Glue legs (left front, left rear and right rear) to body \* Place entire assembly onto base in corresponding holes and allow glue to set.

By not glueing assembly to base at this point makes it easier to paint underside of dragon and base later.

4. Glue right front leg to body.
5. Glue head to neck.
6. Glue right wing (longer wing) to body.
7. Glue left wing (shorter wing) to body.
8. Glue entire assembly to base.

\* If model is to be for display purpose only, any super-glue will work.

If model will be handled often, 5-min. epoxy glue is recommended.
